

ABSTRACT OF THE DISCLOSURE

A lint roller holder assembly having a lint roller support with an outer cylindrical surface. The lint roller support is dimensioned so that a tubular and cylindrical lint roller may be rotatably supported around the outer surface of the lint roller support. An elongated handle is axially slidably mounted to the lint roller support between a first position and a second position. In its first position, the handle extends axially outwardly from one end of the lint roller support when use of the lint roller assembly is desired. Conversely, in its second position, the handle is at least partially contained within the interior of the lint roller support for compact storage, display and/or transportation.
